Total Population Over Time

Illinois has a population of 12,582,032 and is the 6th largest state in the nation. Below are the estimated total population and share of total population over time, along with the 2022 population for each county in the region.

Care must be taken when comparing population for 2019 and 2020, as the 2019 estimate was based on migration and aging adjustments from the 2010 census, and 2020 was a full count of the population. The Census Bureau did not revise previous population estimates to reconcile with the 2020 full counts.

Region

East Central

County	2022 Population
Champaign	206,542
Douglas	19,755
Ford	13,249
Iroquois	26,473
Piatt	16,723
Vermilion	72,337

Age Composition in 2022

Region

The median age in Illinois has been steadily increasing over the past decade. In 2022, the median age was 39.2 compared to 36.6 in 2010. Statewide, just over 17% of Illinois residents are age 65 and over. Below is the composition of population by age in the region.

Population by Age Group

Age Group Count in 2022

Ages 0-4	19,064
Ages 5-9	20,146
Ages 10-14	20,282
Ages 15-19	29,490
Ages 20-24	42,606
Ages 25-29	22,797
Ages 30-34	21,706
Ages 35-39	21,203
Ages 40-44	20,494

Population by Race / Ethnicity

Region

Statewide, about 60% of the population is white, 17% is Hispanic, and 14% is African American. Below is the composition of the population in the region by race and ethnicity, along with estimated population levels for 2017-2021. On this page, Hispanic ethnicity includes all races, and all other categories are non-Hispanic.

Share of Population by Race/Ethnicity

Source: U.S. Census Bureau, 2017-2021 American Community Survey, Table S1810.

Approximately 11% of the population (or 1.4 million people) in Illinois have some type of disability. The most prominent disabilities include ambulatory and the inability to live independently. Below is the composition of persons with disabilities in the region by age and by type of disability.

Veteran Population by Age, Type, Race, & Education

Region ▼
 East Central ▼

16,406

Veterans in Region

Statewide, there are 537,552 veterans in Illinois, which is about 5% of the total population. On the national level, veterans represent about 6% of the total population. Below is some information on the share of the veteran population in the region by age, race, period of service, and educational attainment.

5.8%

% of Population Ages 18+

Periods of service do not total 100% because not all categories are included in the American Community Survey. Race/Ethnicity exceeds 100% because Hispanic ethnicity includes all races.

Source: U.S. Census Bureau, 2017-2021 American Community Survey, Table S2101.

Median Income by County- Households with Children

Region

The statewide median income for all households was \$72,563, which is 5% higher than the national level of \$69,021. In Illinois, the median income was \$110,026 for married couples with children, \$32,586 for single mother households, and \$50,942 for single father households.

Median Income by Household Type

● Married couples with children ● Single mother ● Single father

Source: U.S. Census Bureau, 2017-2021 American Community Survey, Table S1903.

Median Income by County and Race

Region

Statewide, the median income for African American households is \$46,401, Asian households is \$98,367, Hispanic households is \$58,791, and White households is \$73,533. Below are the American Community Survey responses for household income by race in each county of the region. *Care must be taken when comparing income, as some counties do not have sufficient American Community Survey responses regarding income for some racial and ethnic groups. It is not possible to compute a region-wide median income in the American Community Survey data provided.*

Median Household Income by Race

White Non-Hispanic Hispanic or Latino Black or African American Asian

Poverty Rates by Age, Sex, Race/Ethnicity, and Education

Region
East Central

Roughly 1.5 million Illinois residents live below poverty. Children under the age of 5 (17%), females (13%), African Americans (25%), and individuals lacking a high school diploma or equivalent (22%) are more likely to live below poverty. Below are the percentage of residents in the region experiencing poverty by several characteristics. *Percentages are to their total populations in the region- e.g., the percentage of all males, the percentage of all females, etc. For this reason, percentages do not total 100.*

ALICE Population

Asset-Limited, Income-Constrained, Employed persons

Region

The United Way identified an ALICE threshold for persons with income above poverty level, but who nonetheless cannot meet basic costs of living in their counties. The ALICE threshold is based on a household survival budget that includes housing, childcare, food, transportation, healthcare, a smartphone plan, taxes, and a modest reserve for unanticipated one-time costs. Below is a summary of the ALICE population in the region over time and by county.

Count of ALICE & Poverty Households

Indicator ● ALICE Households ● Poverty Households

ALICE Threshold by County, 2021

County	ALICE Households	Threshold - Under 65	Threshold - Over 65
Champaign	23,155	\$50,000	\$50,000
Douglas	2,005	\$50,000	\$45,000
Ford	1,729	\$45,000	\$50,000
Iroquois	3,052	\$45,000	\$45,000
Piatt	1,678	\$50,000	\$50,000
Vermilion	8,519	\$50,000	\$40,000

Sectors, Industries, and Clusters

The terms "sector", "industry" and "cluster" are sometimes a source of confusion, and can be an unnecessary source of debate among various stakeholders.

Sector describes a large segment of the economy, while **Industry** refers to a much more specific group of companies or businesses. The terms industry and sector are often used interchangeably to describe a group of companies that operate in the same segment of the economy or share a similar business type. *In this regional data packet, sector refers to a broad industry category while Industries refer to components of those sectors. For example, Food Manufacturing is an industry within the Manufacturing Sector.*

A **cluster** is a regional concentration of related industries in a particular location. Clusters are a striking feature of economies, making regions uniquely competitive for jobs and private investment. Adding to the confusion, the education community established a national framework of 16 "career clusters", which links programs of study to occupations with similar knowledge and skill requirements. *Industry clusters are typically considered in economic development strategic plans.*

The table on the upper left is a standardized list of Industries from the North American Industry Classification System (NAICS) at its highest, "2-digit" sector level. Within each of these sectors, the NAICS groups similar companies into ever-increasing levels of granularity, down to the "6-digit" level. The table on the lower right shows how this works in the Construction sector, with just a partial list of more detailed codes. There are literally thousands of 6-digit NAICS codes, which may be viewed at naics.com/search. For our purposes, 2-3 digit NAICS codes provide sufficient detail.

NAICS is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. Like all data, NAICS does have some limitations and caveats. For example, NAICS classifies businesses based on their primary activities, but a specific business may have significant activity in other sectors. For example, Wal-Mart's primary activity is a retailer, but it employs thousands of workers focused on Transportation /Distribution / Logistics at its distribution centers and in-house trucking division.

Readers are cautioned to not make assumptions on the types of businesses or occupations implied by high level groupings. For example, the NAICS "Information" sector primary includes industries focused on publishing and telecommunications. Occupations requiring "information technology" skills are embedded in companies from all sectors. We must look beyond the Information sector to discern the full extent of the supply and demand for jobs and workers needing IT skills. There are significant numbers of tech workers spread across manufacturing, finance, government and many other sectors. Likewise, "Energy" is not a sector in the NAICS model, but energy-related industries and occupations are found in sectors such construction, manufacturing, and professional services.

Code	Sector Title	Number of US Entities
11	Agriculture, Forestry, Fishing and Hunting	376,065

236118	Residential Remodelers

Regional Sector Analysis

Change in Employment and Location Quotient

The maps on the following pages show the "where" for selected economic data at the regional and county levels. This view allows readers to more easily see how each county contributes to the overall economic engine in a region and how regions as a whole compare to other areas of the state.

The **Employment Change** maps indicate the level of gain or loss of employment between Q4 2021 and Q4 2022 (latest available at time of writing). These maps can be used to understand where gains and losses occurred, and identify targets of opportunity where skilled workers may be in greater demand, or identify areas which may be in need of attention from regional workforce and economic development agencies.

The **The Location Quotient (LQ)** maps indicate counties where sector employment is most and least concentrated as of Q4 2022. The LQ value indicates how concentrated employment in a given sector compares to the nation.

An LQ of 1.0 means employment is in line with the overall national employment for that sector. A value greater than 1.0 means that sector's employment is more heavily concentrated here than in the nation, while values less than 1.0 indicate employment is less concentrated than the nation. The farther away from 1.0, the greater the difference between what is happening in the county than the nation. For example, if a sector represents 40% of employment in a county and that sector nationally represents 10% of employment, it would have an LQ of 4.0, or a concentration of employment that is 4 times higher than the nation.

Note: Some maps on the following pages have counties shaded black, indicating an insufficient number of workers to reach federal employment reporting thresholds. This data is suppressed to protect the privacy of employers and workers in those counties. We use 2-digit NAICS level data to minimize the instances of data suppression.

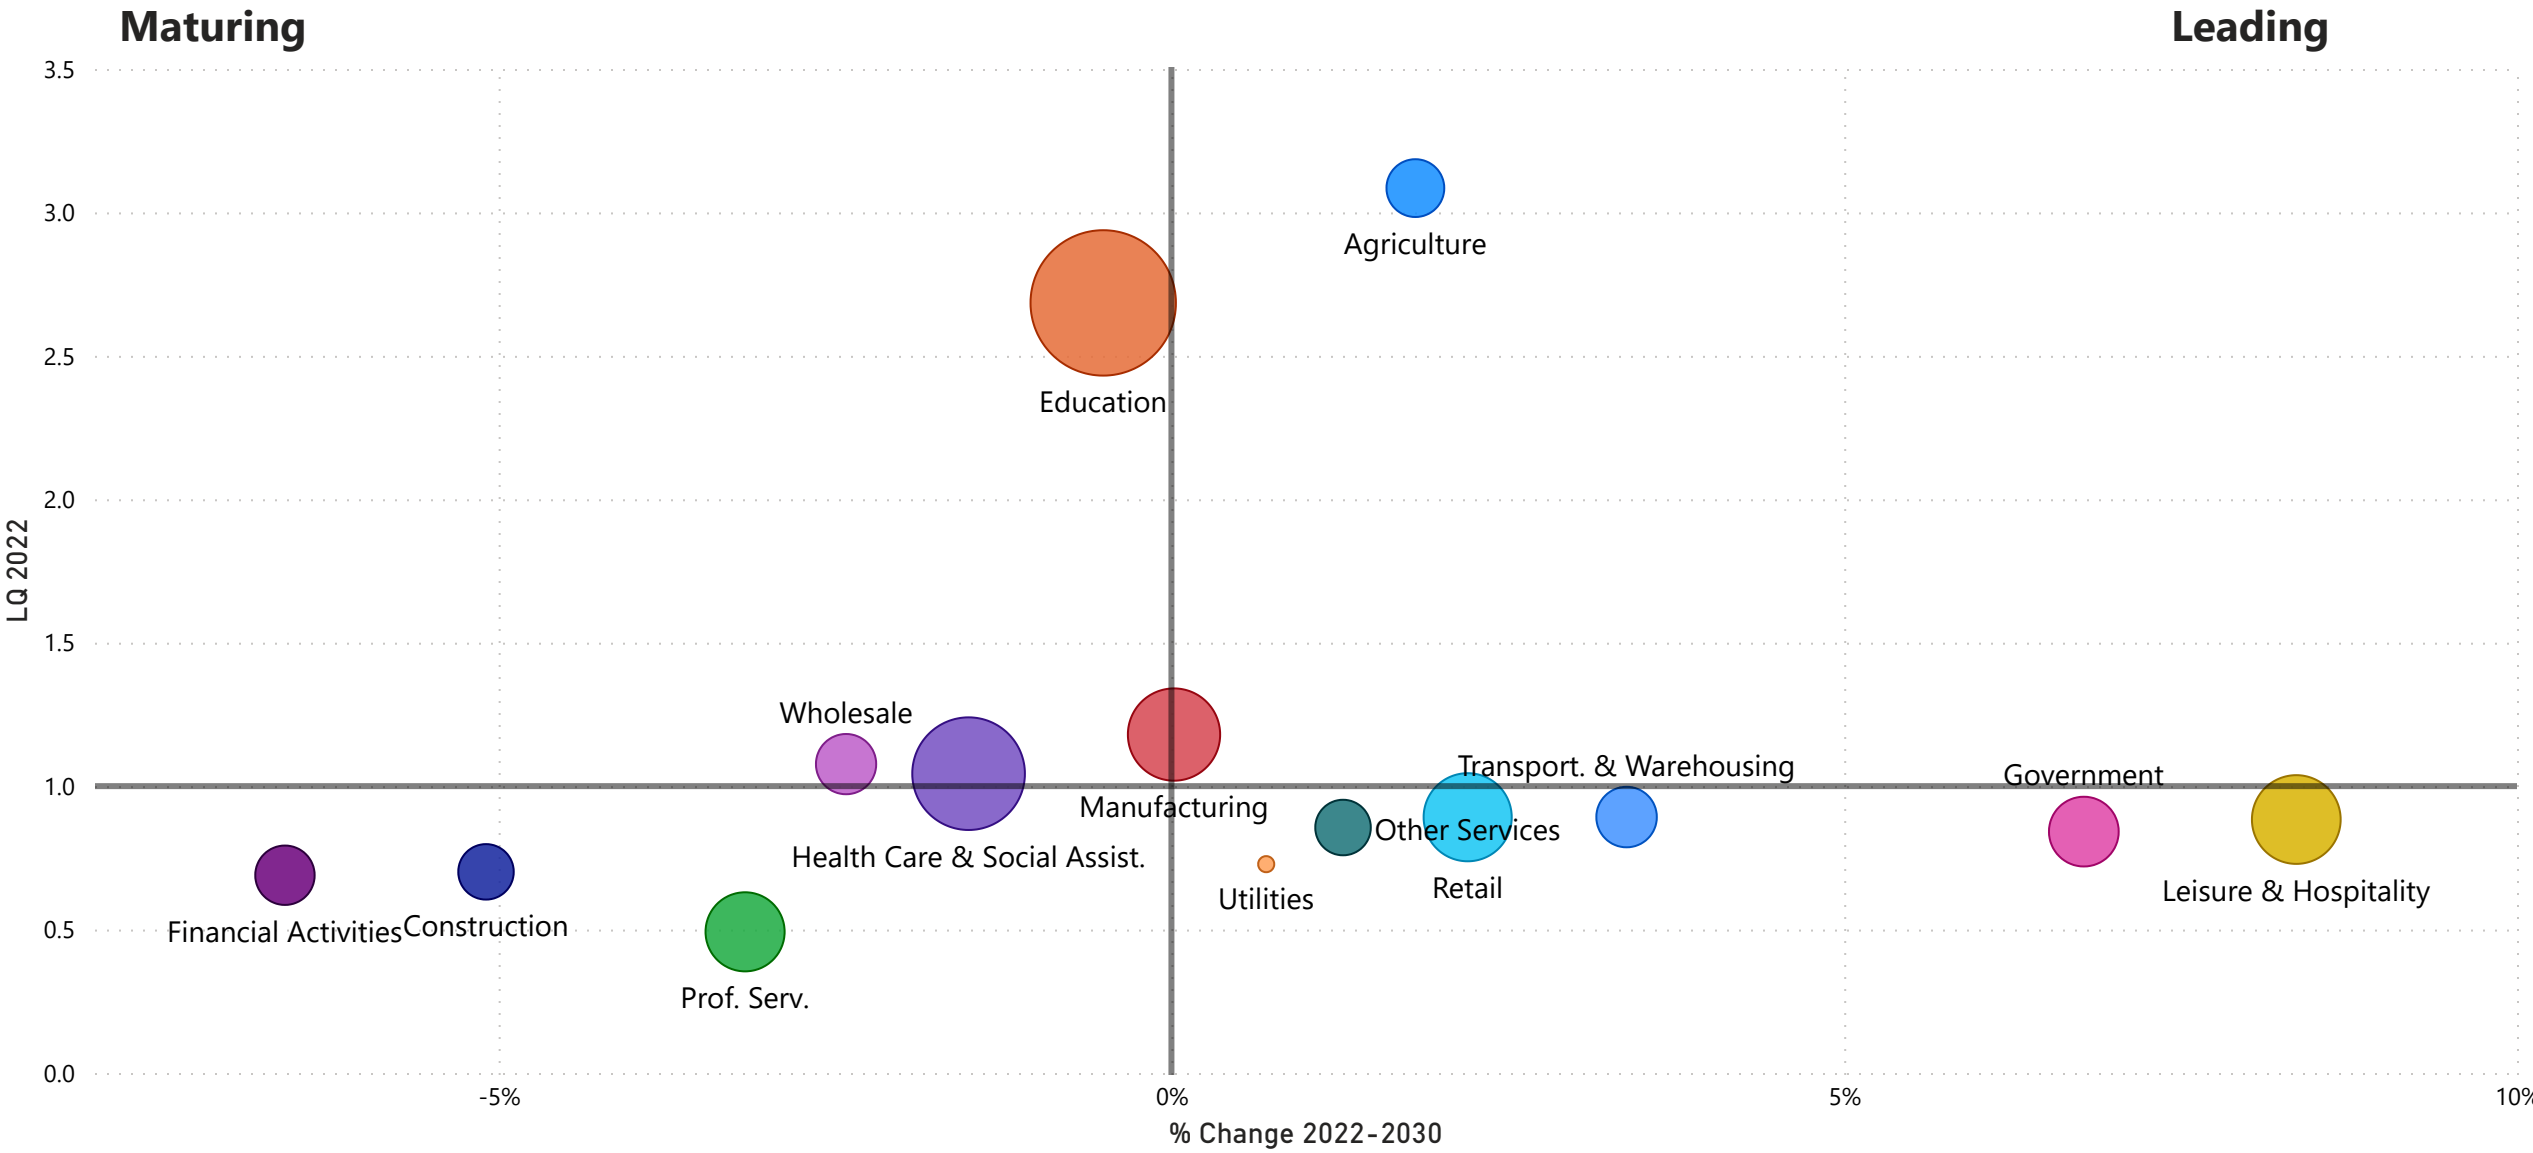

The maps on the following pages can be used to quickly see where sector-based employment is concentrated and the degree to which it is above or below the national level. Areas with high LQs might have an inherent advantage, while areas with low LQs might have an inherent disadvantage for supporting a particular sector's businesses with skilled workers.

Employment and Location Quotients by Sector

Bubble size corresponds to total employment in 2022. Some sectors excluded in lower left quadrant due to disproportionately low location quotients and employment declines. Education includes public and private, and government excludes education.

Region

Source: Illinois Department of Employment Security, unpublished 2022-2030 employment forecasts.

Emerging

Notes on Bubble Charts

The bubble chart on the previous page compares sectors by their projected employment change, for 2022-2030, their employment location quotient, and their total employment size in 2022. The X axis shows percent changes, the Y axis shows location quotients, and the size of the bubbles corresponds to total employment size in 2022.

- The upper right quadrant of the chart shows *leading sectors*- those with location quotients greater than 1 and projected employment growth.
- The upper left quadrant shows *maturing sectors*- those with large location quotients, but projected employment declines.
- The lower right quadrant shows *emerging sectors*- those with location quotients below 1, but with growing employment.
- The lower left quadrant shows sectors with low location quotients and declining employment.

Some sectors are excluded in the bubble charts for clarity. We exclude some sectors in the lower left quadrant when they have disproportionately low location quotients or disproportionate employment declines in the region (e.g., LQ of 0.25 when the next lowest is 0.5, employment loss of 30% when next lowest is 10%).

The information in this chart was generated as part of a one-time initiative by the IDES, due to issues in the timing of data publications relative to the WIOA planning timeline. At the time of writing, the most recent employment forecasts available were for 2020 - 2030. In preliminary analyses of this data, nearly all sectors could have been classified as Emerging, due to sectors re-hiring after the 2020 downturn. *The IDES updates their long-term employment forecasts every two years, and forecasts for 2022 - 2032 were unavailable at the time of writing.* For the purposes of this report, the IDES developed preliminary employment estimates in 2022, for comparison with the projected employment levels in 2030. This data is intended to *reframe* the 2020-2030 employment forecasts, based on the recovery that is reflected in 2022 employment counts. *The 2022-2030 forecasts are meant to control for the portion of employment growth that was due to rehiring.*

Although several other federal data sources offer counts of employment for 2022, they are not meant for direct comparison with the IDES forecasts. For example, the Quarterly Census of Employment and Wages includes public school employment in Government rather than Educational Services. The bubble charts show relative employment size differences (e.g., there are more jobs in health care than in natural resources and mining), but total employment counts from this one-time initiative are not directly compatible with other data products.

The following pages show changes in regional sector employment for 2019-2022 and location quotients by county for 2022.

% Change in Regional Sector Employment, Q2 2019 - Q2 2023 (Not Seasonally Adjusted)

Below is a high-level comparison of total employment by sector in the region for Q2 2019 (pre-pandemic) vs Q2 2023 (latest available at time of writing). Sectors are sorted by size of % employment change. On the right are total jobs in Q2 2023 by sector, sorted by employment size.

Total Employment Change by County, Q4 2021 - Q4 2022

In this map and the maps on the following pages, darker orange indicates more employment declines over the past year, while darker blue indicates more employment growth. Region-level employment changes do not reflect the employment churn that occurs *within* some regions.

Care must be taken when comparing percentage changes, as they are relative to the employment size of each county. For example, some of the largest percentage employment changes were in counties along the Southern border with smaller total employment sizes.

The following pages offer more detail by sector and by county within each region.

Financial Activities Sector

Q4 2021- Q4 2022 % Employment Change & Q4 2022 Employment Location Quotient

Component Industries of Financial Activities Sector (NAICS 52-53)

Finance and Insurance (NAICS 52)

- Monetary Authorities - Central Bank (NAICS 521)
- Credit Intermediation and Related Activities (NAICS 522)
- Securities, Commodity Contracts, and Related Activities (NAICS 523)
- Insurance Carriers and Related Activities (NAICS 524)
- Funds, Trusts, and Other Financial Vehicles (NAICS 525)

Real Estate, Rental, and Leasing (NAICS 53)

- Real Estate (NAICS 531)
- Rental and Leasing Services (NAICS 531)
- Lessors of Nonfinancial Intangible Assets, e.g. IP (NAICS 533)

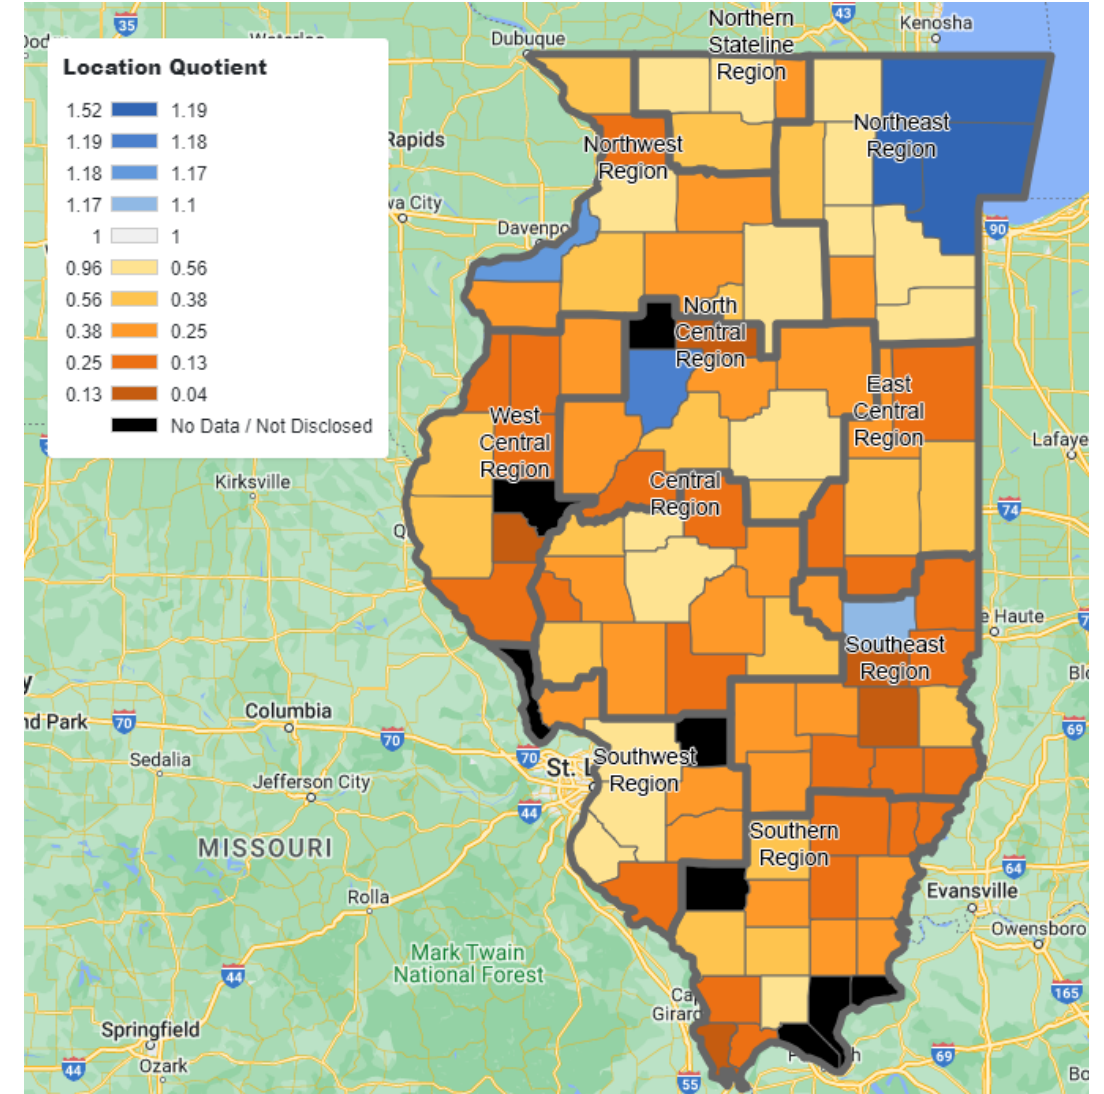

Source: U.S. Bureau of Labor Statistics, Quarterly Census of Employment and Wages, Q4 2021 & Q4 2022. Retrieved from the Illinois Employment Business System on Illinois WorkNet.

Professional & Business Services Sector

Q4 2021- Q4 2022 % Employment Change & Q4 2022 Employment Location Quotient

Components of Professional and Business Services Sector (NAICS 54-56)

- Professional, Scientific, and Technical Services (NAICS 54)
- Management of Companies and Enterprises (NAICS 55)
- Administrative and Support and Waste Management and Remediation Services (NAICS 56)
- Administrative and Support Services (NAICS 561)
- Waste Management and Remediation Services (NAICS 562)

Source: U.S. Bureau of Labor Statistics, Quarterly Census of Employment and Wages, Q4 2021 & Q4 2022. Retrieved from the Illinois Employment Business System on Illinois WorkNet.

Education and Health Services Sector

Q4 2021- Q4 2022 % Employment Change & Q4 2022 Employment Location Quotient

It is not possible to dissect this sector into health care or education alone in some counties, due to suppression.

Components of Education and Health Services Sector (NAICS 61-62)

Educational Services (NAICS 61)

Health Care and Social Assistance (NAICS 62)

- Ambulatory (i.e., outpatient) Health Care Services (NAICS 621)
- Hospitals (NAICS 622)
- Nursing and Residential Care Facilities (NAICS 623)
- Social Assistance (NAICS 624)

Source: U.S. Bureau of Labor Statistics, Quarterly Census of Employment and Wages, Q4 2021 & Q4 2022. Retrieved from the Illinois Employment Business System on Illinois WorkNet.

Leisure and Hospitality Sector

Q4 2021- Q4 2022 % Employment Change & Q4 2022 Employment Location Quotient

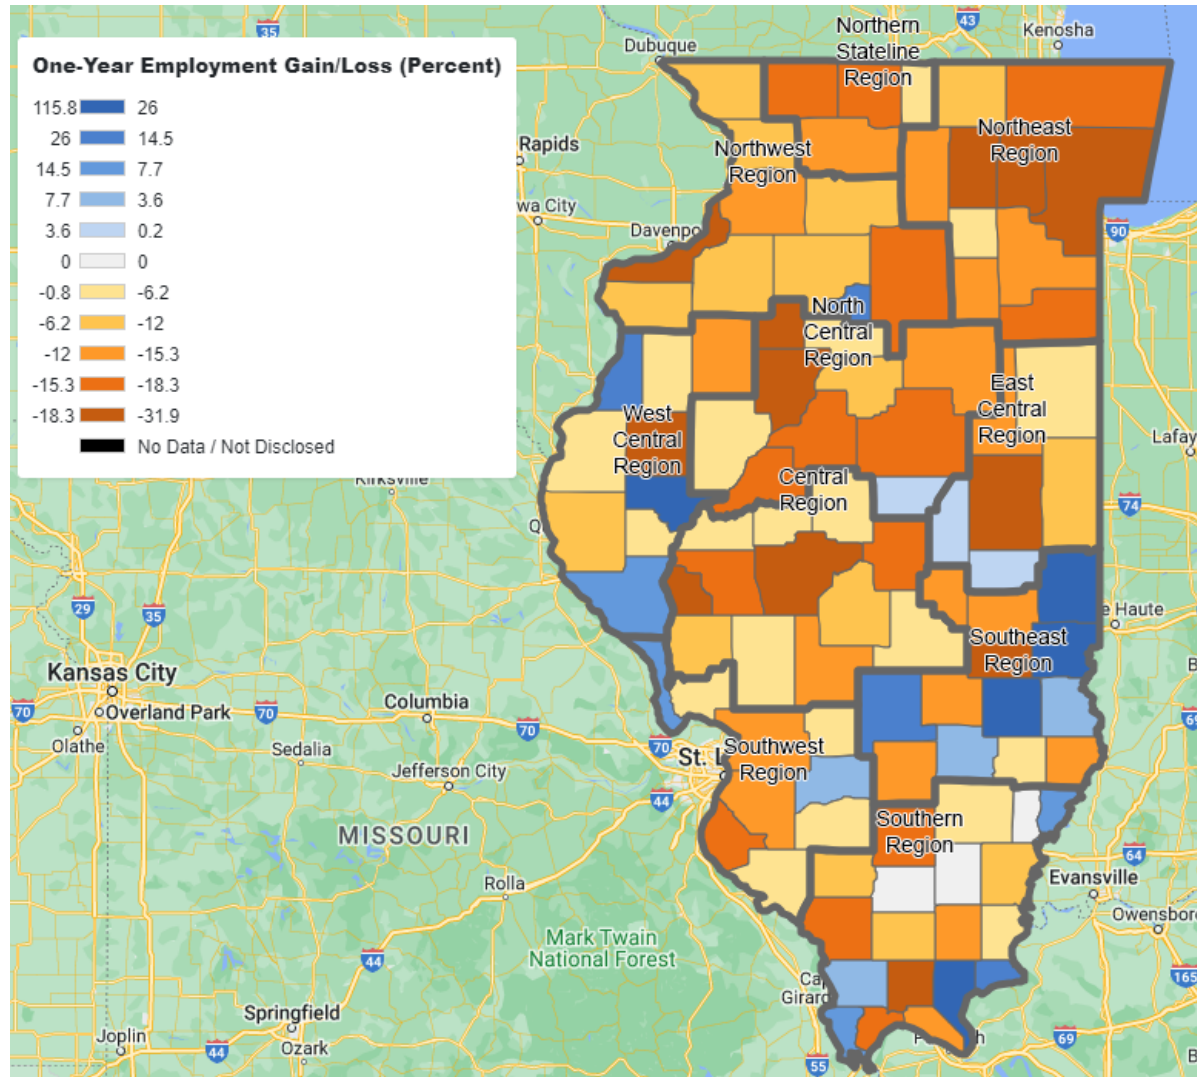

Components of Leisure and Hospitality Sector (NAICS 71-72)

Arts, Entertainment, and Recreation (NAICS 71)

- Performing Arts, Spectator Sports, and Related Industries (NAICS 711)
- Museums, Historical Sites, and Similar Institutions (NAICS 712)
- Amusement, Gambling and Recreation Industries (NAICS 713)

Accommodation and Food Services (NAICS 72)

- Accommodation (NAICS 721)
- Food Services & Drinking Places (NAICS 722)

Marketing Managers	39	Active Learning, Active Listening, Critical Thinking	49.55	66.83
Computer & Information Systems Managers	38	Critical Thinking, Active Listening, Reading Comprehension	60.46	76.98
Lawyers	29	Active Listening, Speaking, Reading Comprehension	51.73	80.14

Notes on Demand Occupations

Each year, the Illinois Department of Employment Security (IDES) identifies a top-ten list of occupations at each education level with a large number of projected annual job openings and high pay for their education categories. These occupations are reported in the Learn More, Earn More publication and this report shows those demand occupations from the 2022 edition.

All demand occupations are selected based on projected number of annual job openings, not necessarily by growth. Occupations can have job openings even with projected total employment declines, due to replacements. The IDES provides long-term occupational forecasts for all occupations, but care must be taken when comparing percentage growth rates for occupations with fewer jobs in the base year.

The IDES also identifies demand occupations that typically provide on-the-job training. In this report, they are excluded in the interest of simplicity.

Total Enrollments and Completions by Degree Level, 2022

Note: Enrollments and graduations are two separate cohorts- e.g., those enrolled in long-term programs in 2022 do not graduate in 2022. Enrollment in some programs might not persist from year to year. Completions in some programs might not correspond directly to labor availability, given that some international students return to their home countries.

50701	Danville Area	2	0	8	34	143	4	20	11	42	11

Notes on ICCB Completer Data

Care must be taken when viewing educational program data, given that program completions do not necessarily correspond to the number of individuals. Some credentials are stackable, meaning that the same person completes multiple programs. In this report, *enrollments* are unduplicated, but completions are not. In other words, enrollments show counts of individuals while completions show counts of degrees or credentials.

In previous years, these regional data packets included information for all community college districts that intersected the region boundaries. Previously, community college districts on the border of two regions were included in the data for *both* regions. In this report, we instead show information from community college districts *primarily located in the region*. In some regions, this might look like a decrease in enrollments and completions over the previous report, because a bordering community college district was included in another region.

Below is a summary of all community college districts that were affected by this change in methodology:

- The Central report used to include Lewis & Clark (district ID 53601). It is now found in the Southwestern report.
- The East Central report used to include Kankakee (52001). It is now found in the Northeast report.
- The Northwest report used to include Highland (51901). It is now found in the Northern Stateline report.
- The Southwestern report used to include Kaskaskia (50101). It is now found in the Southwestern report.
- The Southern report used to include Illinois Eastern (529). It is now found in the Southeastern report.

More detailed information for all community colleges is available in the ICCB Databook, available at: <https://www2.iccb.org/data/data-characteristics/>.

Supply Gap Analysis for Occupations Requiring a Certificate or License

Region

East Central

The supply gap ratio is a proxy measure that provides insight on how closely supply aligns with demand for selected occupations. The calculation of the ratio is supply / demand. In this case, the supply is the number of program completions in the region associated with the occupation and the demand is the estimated number of regional job openings. A gap ratio of one indicates one completer per projected job opening. Gaps lower than one indicate more job openings than completers, and gaps greater than 1 indicate more completers than openings.

Completers do not include most apprenticeships and true OJT provided solely by employers.

Source: Illinois Department of Employment Security, Illinois Board of Higher Education, & Lightcast, 2023.

Supply Gap Analysis for Occupations Requiring an Associate's Degree

Region

East Central

The supply gap ratio is a proxy measure that provides insight on how closely supply aligns with demand for selected occupations. The calculation of the ratio is supply / demand. In this case, the supply is the number of program completions in the region associated with the occupation and the demand is the estimated number of regional job openings. A gap ratio of one indicates one completer per projected job opening. Gaps lower than one indicate more job openings than completers, and gaps greater than 1 indicate more completers than openings.

Completers do not include most apprenticeships and true OJT provided solely by employers.

Source: Illinois Department of Employment Security, Illinois Board of Higher Education, & Lightcast, 2023.

Supply Gap Analysis for Occupations Requiring a Bachelor's Degree

Region
East Central

The supply gap ratio is a proxy measure that provides insight on how closely supply aligns with demand for selected occupations. The calculation of the ratio is supply / demand. In this case, the supply is the number of program completions in the region associated with the occupation and the demand is the estimated number of regional job openings. A gap ratio of one indicates one completer per projected job opening. Gaps lower than one indicate more job openings than completers, and gaps greater than 1 indicate more completers than openings.

Completers do not include most apprenticeships and true OJT provided solely by employers.

Source: Illinois Department of Employment Security, Illinois Board of Higher Education, & Lightcast, 2023.

Supply Gap Analysis for Occupations Requiring Education Beyond a Bachelor's Degree

Region

The supply gap ratio is a proxy measure that provides insight on how closely supply aligns with demand for selected occupations. The calculation of the ratio is supply / demand. In this case, the supply is the number of program completions in the region associated with the occupation and the demand is the estimated number of regional job openings. A gap ratio of one indicates one completer per projected job opening. Gaps lower than one indicate more job openings than completers, and gaps greater than 1 indicate more completers than openings.

Completers do not include most apprenticeships and true OJT provided solely by employers.

Caveats and Limitations of Gap Analysis

The gap ratio is not intended to provide a comprehensive measure of labor market alignment- it shows an initial comparison of suitable completers in the most recent year available to the projected annual job openings in an occupation.

Suitable completers are identified via a crosswalk of curriculums to occupations developed by Lightcast. This crosswalk is based on data from the National Center for Educational Statistics and Lightcast's experience serving as a consultant for educational and workforce development agencies. It shows the types of curriculums typically completed by employees in a given occupation.

We use Lightcast's crosswalk of occupations to curriculums to identify potential target curriculums for each occupation, and then match that to counts of completions at the appropriate degree level for each occupation. For example, the gap ratios for occupations requiring a certificate or license do not consider bachelor's degree completions, and the bachelor's degree occupations do not consider associate's-degree completions in the same fields.

The gap ratio provides a conservative comparison of recent completions to annual openings. A gap ratio less than 1 (i.e., fewer suitable completers than openings) might not necessarily indicate inability for employers to fill positions. Below are several potential scenarios where job openings could be filled with persons other than recent educational completers:

- The employer provides true on-the-job training.
- Employees are qualified for the job due to past work experience or apprenticeships.
- Workers completed a suitable educational program in the past and are currently underemployed, but could qualify for a new job opening.
- The job is held by a commuter from outside the region, or someone who would move into the region for the job.

Similarly, gap ratios greater than 1 might not necessarily translate to employers easily filling job openings. Below are some examples of scenarios where job openings could remain despite a surplus of recent completers in the region.

- Job turnover, due to a mismatch of expectations as completers transition from education to the workplace.
- Completers find employment outside of the region, either by commuting out or relocating.
- Completers pursue stackable credentials or more advanced degrees before entering the labor market.
- Some programs attract international students who return to their home countries after completing their program.

Appendix. Energy Employment Activities

Employment in clean energy is difficult to quantify at a regional level, due to limitations in the standard state/federal data collections by industry and occupation. The standard data products do not clearly or consistently distinguish businesses involved in renewable energy as compared to non-renewable. For example, the Automobile and Light Duty Motor Vehicle Manufacturing industry includes both electric vehicles and gasoline-powered cars. Similarly, most clean-energy occupations are included in occupational categories that include other activities. For example, supervisors of energy efficiency construction projects are included in a category that includes supervisors for other construction projects. Any estimate based on the standard industry/occupation classifications is likely to overestimate clean energy employment, as the categories are not necessarily limited to clean energy.

The next two pages show some conservative estimates of energy sector employment in the region, based on data from the U.S. Department of Energy, *2023 U.S. Energy & Employment Jobs Report*. The data is based on a national survey of employers, with results published by state and by county. The data in this survey differs from the standard industry and occupational classifications in other federal data collections.

*The county data is susceptible to suppression for business activities with less than 10 employees in the county. As a result, the data might somewhat undercount employment in regions. [An employment count of zero in this data might not reflect reality.](#) Regardless, these data might offer a **starting point** for discussions regarding the alignment of workforce and economic development plans with potential opportunities related to clean energy.*

The full county-level dataset from the Department of Energy is available at: <https://www.energy.gov/policy/us-energy-employment-jobs-report-useer>

Historical county-level survey data is available from the Department of Energy, but we advise against using it for a time series analysis, due to inconsistent data availability in some counties.

Energy Employment in 2022 (1 of 2)

Below are estimated counts of employment in businesses related to energy. Some of these activities might involve fossil fuels. These estimates are susceptible to suppression at the county level, and so employment might be undercounted for some activities.
